BOUNDLESSWORLD

BoundlessWorld is a world beyond belief with exciting challenges, a place to make your dreams can come true. The BoundlessWorld team is building a unique virtual world on the BNB smart chain platform where players can create, own, and earn money, and they can also create, buy and sell their digital assets (NFT) and earn money. BoundlessWorld is an open source project that was launched on the platform of BNB smart chain and operates in the fields of NFT, Web3, Exchange, App, Media, Gaming, Metaverse, Artificial intelligence. This project has started its activity with its own exchange, wallet and APP.

In addition to the digital wallet, it plans to provide other services in its application, such as an environment for chatting and messaging based on the blockchain among the consensus of users, the publication of NFTs and their market place, as well as a space for advertising to help businesses and the growth of other activities as much as possible. To create new opportunities through communication between platforms for developers and influencers and other people with any idea, opinion and expertise.

”

BOUNDLESSWORLD

After this stage, Future market maker company plans to enter the metaverse and gaming space, and with the growth of the project, by providing land along with its unique potentials, it is possible to provide many features in step with the progress of other facilities of the project, to establish new tasks and goals. The game creates a harmonious and excellent ecosystem with a purposeful, attractive and forward looking scenario and opens a window of the modern world to users.

Motivation and goal:

As you know, WhatsApp and Telegram social networks have created features for their users, but they are not a safe space and sending content is done as an intermediary. To address this problem, Boundless World intends to create a safe space for communication between users based on smart contracts without intermediaries, and by building your own application on the blockchain platform, it is done by creating a safe space for transferring content without intermediaries and coded. The aim of Future Market Maker Company is to design application and wallet together and on one platform, to create a safe and efficient environment for its contacts in which users can respond to the majority of their needs as an active person in the crypto field. To answer these needs, according to the needs assessment of its experts, the Boundless World team has come to the conclusion that in this application, a specialized wallet, the user's personal profile, messaging on the blockchain platform, NFT market place and advertising are defined for businesses active in different fields, which will be discussed in detail in the following.

The infrastructure of doing the project as a Metaverse project is as follows:

The word metaverse consists of two parts, meta, which means the beyond, and verse, which means the world, and together it means the world beyond. Metaverse was used in 1992 in Snow Crash by Phil Stephenson. Since then, the term metaverse has been used to describe various innovations focused on creating a more sustainable virtual reality that permeates our physical and real lives. Since the concept of metaverse is still developing, several definitions can be created for it. Metaverse is a digital realm that allows humans to interact with other people, digital characters in the form of avatars, communicate, collaborate, play games, handle business and business affairs, socialize, etc. And in a simple way, it is actually a virtual world in which users can be completely virtual with the capabilities of today's world and respond to their needs. With the expansion of different projects, different metaverse ideas and spaces were created and other projects also entered this field.

Considering the existing conditions and the attractive environment of the metaverse field and the needs that it saw in this space along with its creative ideas, Future Market Maker Company is trying to solve and provide efficient and attractive solutions. By installing boundless app from the beginning of the project, every person enters their metaverse journey indirectly with Future Market Maker Company. As mentioned in the app section, users' profiles are presented to the person in the form of nft, and in the future the person can use it as his metaverse avatar.

After that, by creating the land and game section in the project, users gain experience and progress in the project and enter the boundless world, where we seek to create an efficient, dynamic and exciting ecosystem. In Boundless Land, users don't just have a virtual land and a normal Metaverse game.

In fact, they enter a new world, which puts the entire physical world in the hands of users and causes the growth and prosperity of individuals or brands, this world is full of many opportunities in every field. boundless land creates a single and dynamic ecosystem with the help of consensus of users and their exchanges, which ultimately leads to project security and investors' assets becoming more valuable.

In order to prevent the misuse of profit-seeking people, the Future Market Maker company provides solutions that help better security and preserve the capital value of those interested in the ecosystem. Some of the statements in this white paper are based on the future and forward-looking statements that are made based on the beliefs of the construction team and reflect them. Current expectations are statements that express the company's view regarding future events in the present tense. Based on the currently available information, there may be uncertainties that cause minor changes in the company's results and views.

ECONOMY

Application of BLB value New

And improved experiences such as land and game and land updates will be introduced gradually. Players will constantly have new goals to achieve in the world of BLB. Ultimately, the demand for BLB benefits from their inherent value that they can provide to players in the form of entertainment and competitive social achievements and progress. Now it's time to advance the main path in the battle and expand the size of the group. In the long run, there will be upgrades to land and game and other assets that require basic items; players may be able to obtain these building components themselves or by opening upgrade boxes. And they face competition and challenges, which creates a long-term supply reduction for Avatar. A pivotal development is coming, promising to create a much stronger bond between players and the avatars they choose to upgrade and survive.

IMPROVE ACCESSIBILITY

Currently, there are various places for players to use Land and Game to compete, have fun and socialize with the community, for example: Allowing players to enjoy the free-to-play BoundlessWorld will enable more players to fall in love with the BLB world and want to participate in the economy for the long term. The higher the demand for BLB and related assets, the healthier the long-term economy will be. In this section, we examine how to accept the process of digital currencies, we introduce the necessary conditions for the emergence of a distribution platform and the use of Land and Token.

LAND & TOKEN

With the launch of the project, we introduce two digital assets, land and bep_20 token, which are used for land and games, as well as for purchasing domestic goods and services.

DEVELOPERS AND OTHER CONTENT

Builders will demand the land so that they can build it and reach their goal. Plots of land are distinguishable from each other due to differences in secondary markets and are traded at different prices. On the other hand, BLB acts as a representative to evaluate the price of a piece of land, and also using the BLB token to purchase goods and services in the virtual world creates useful value.

STRENGTHEN THE NETWORK

Ownership of lands is obtained through a bep_20 token called BLB. This will be a token to create value in the network and obtain a piece of land.

CONTENT MANAGEMENT

The issue of filtering content for mature audiences such as pornography, violence, or gambling. It is difficult to solve in a decentralized network. We expect a market to emerge here with a reputation based approach where users can choose one or more items. Provider white/black lists that track the type of content provided on each.

DECENTRALIZED DISTRIBUTION OF CONTENT

Content distribution through P2P network has two main problems, the first one includes download speed. Retrieving a file from a DHT or system's distributed peer-to-peer storage has traditionally been very slow.

Especially in a graphical program like boundless world, users will object to using a system that does not load, so experience the speed with us. The second issue involves availability, ensuring that content is adequately distributed across the network without loss.

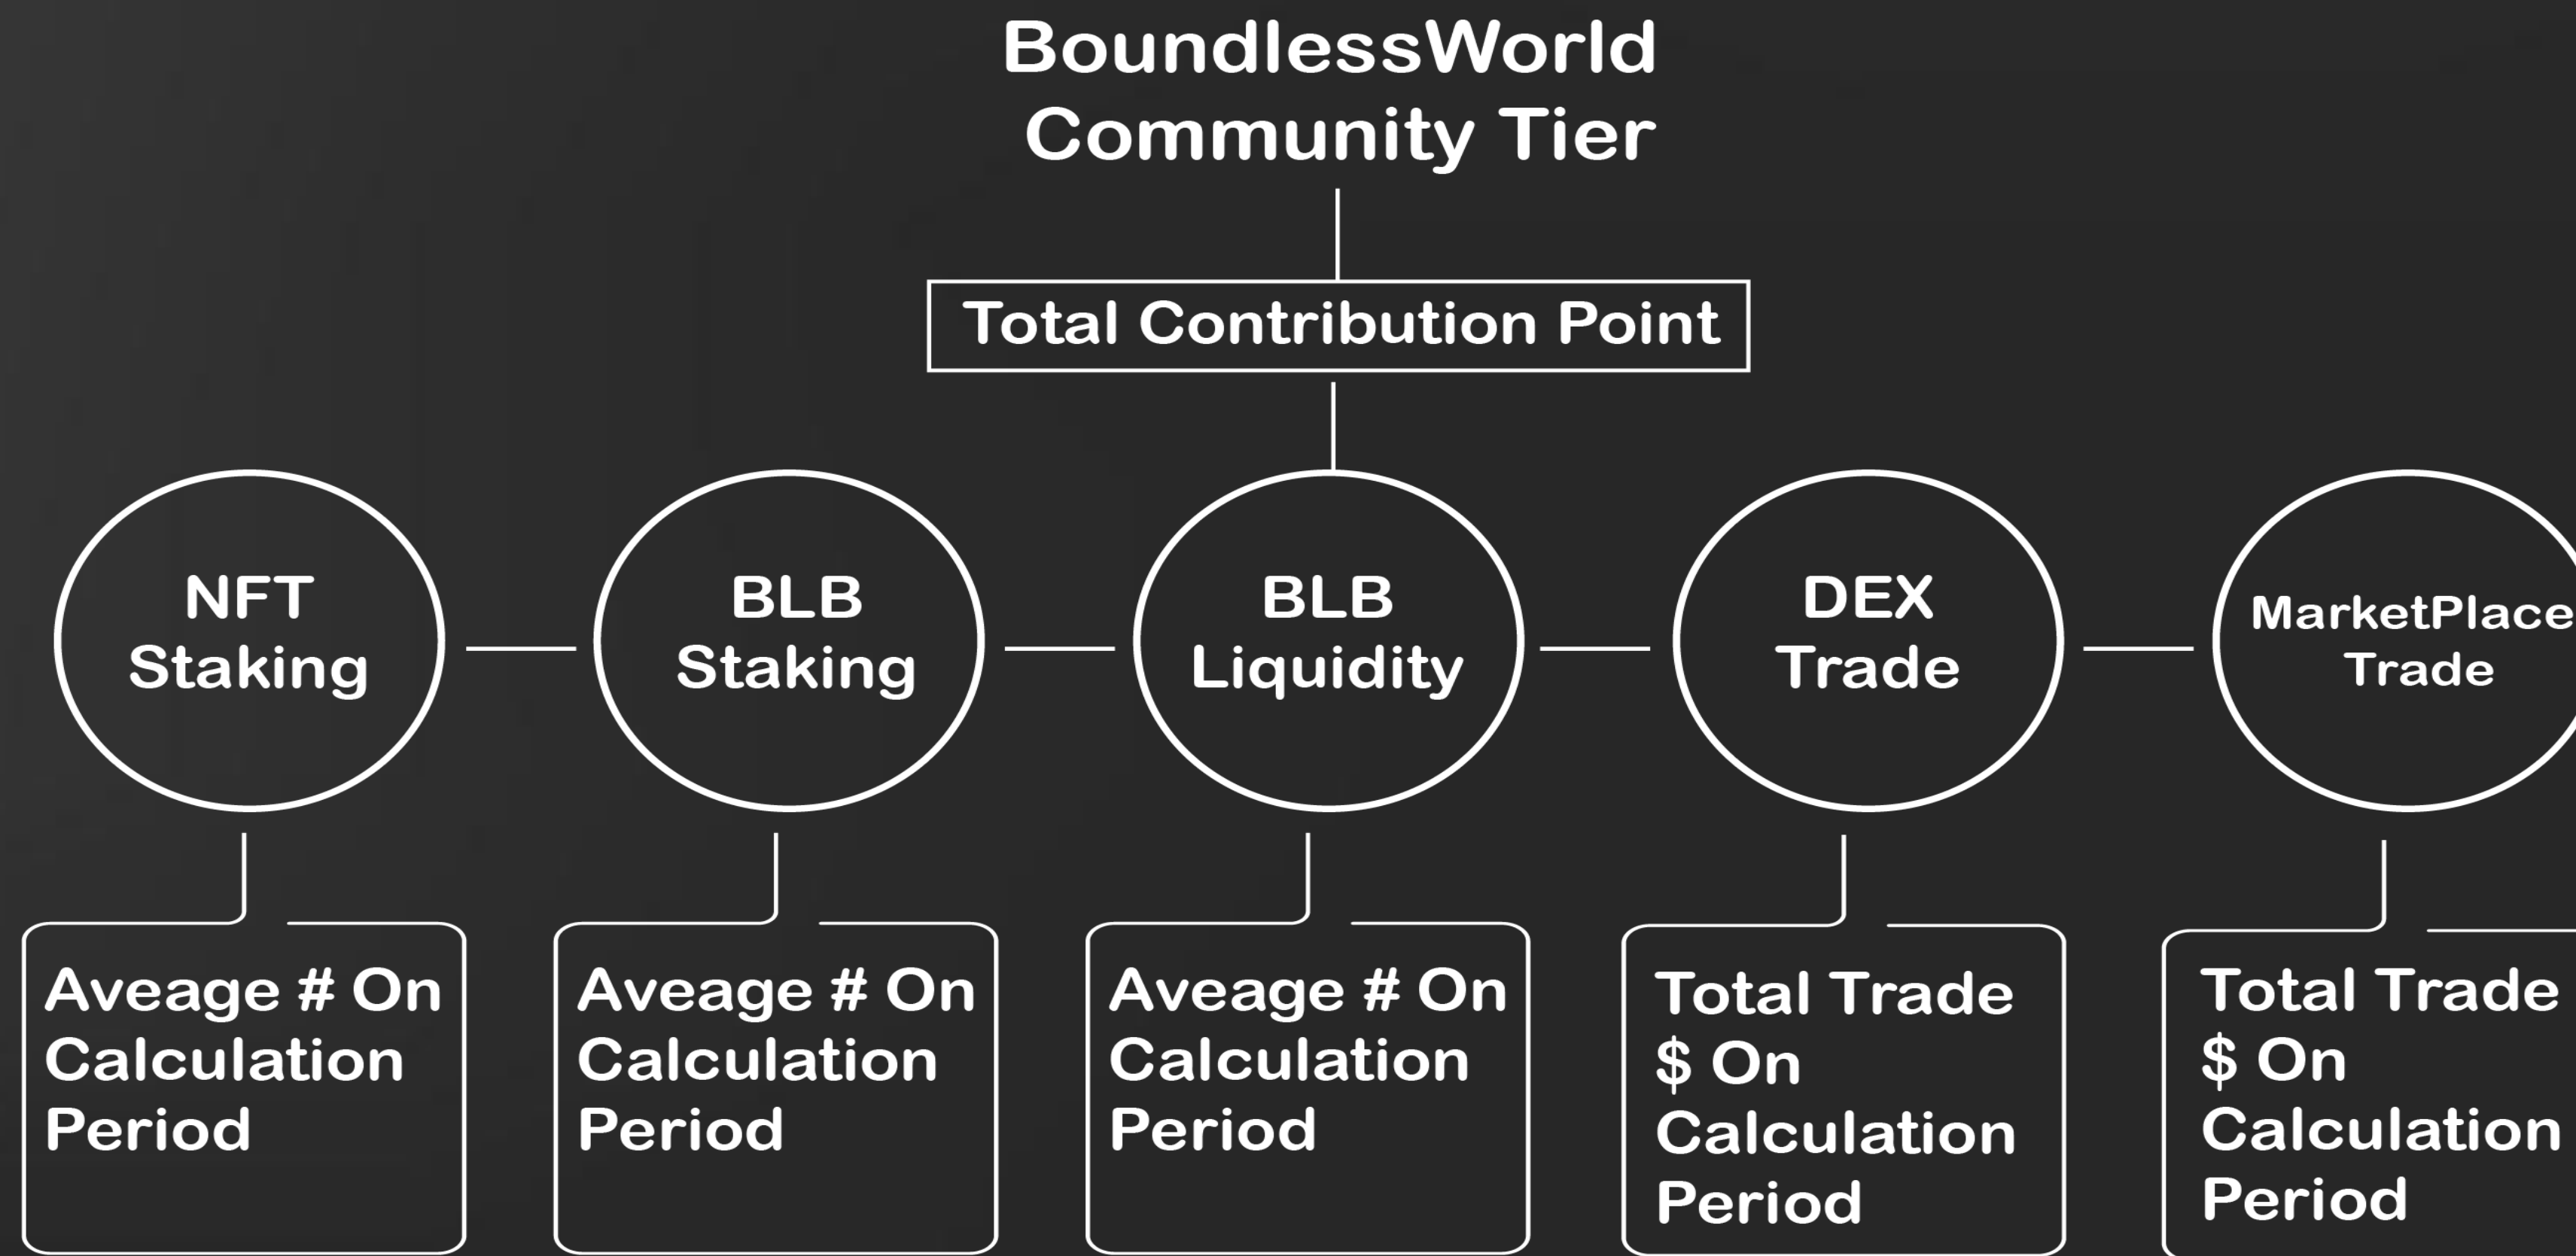

DOCUMENT

<https://docs.boundlessworld.org/>

PROOF OF STAKE

Proof of Stake (Pos) is a consensus mechanism or protocol that uses the amount of stake (or value) in the system to determine consensus. Basically, a consensus protocol is something that governs the rules and parameters governing the behavior of blockchains. Think of consensus as a set of rules that each network participant adheres to. Since blockchains are not controlled by any single central authority, a consensus protocol is instead used to allow distributed network participants to agree on the network history captured on the blockchain - to reach a consensus about what happened and follow a single source.

PROOF OF STOCK FEATURES

One of the key features of PoS is that as the value of the user increases, so does the opportunity to maintain the ledger. This means a higher chance of generating new blocks that can be added to the blockchain and timestamped accordingly.

The creator of a new block is chosen based on a combination of random selection and determination of their equity or wealth. Some kind of leader selection happens in the chain. It is worth noting that in the Proof of Stake protocol, participants collect transaction fees and thereby add to their wealth. This approach encourages steady and sustainable growth of the blockchain and reduces the instances of transaction suspensions that can prevent the chain from growing.

How does proof-of-stake compare to proof-of-work protocols?

In contrast, Proof of Work (PoW) is a synchronous protocol that encourages miners to compete to be the first to solve any problem in a block. A reward system is used to motivate solving this problem. However, this approach comes at a cost with increased power consumption and longer time to resolve problems in the chain. These factors can significantly slow down the network and mean that it is expensive to maintain.

MAIN ADVANTAGES OF PROOF OF STAKE

Some of the primary advantages of PoS over PoW are: Strict security protocols are included in a PoS protocol. Reduced concentration – The risk of concentration is reduced by penalizing selfish actions in the network. Energy Efficiency – Energy consumption is very efficient as it requires less amount of electricity as well as hardware resources to generate and run the blockchain. Cost efficiency – PoS currencies are much more cost effective than currencies that work on PoW protocols.

Proof
of
Stake

LIQUIDITY

It includes exchanges that have an order book for trading and doing transactions based on a bid and ask system. The engine of these exchanges identifies and connects buyers and sellers who match the price. In this system, people who want to buy and sell a certain asset create a limit order, and people who accept their offer price will execute their order.

ADVANTAGES OF LIQUIDITY POOLS

The liquidity pool is actually an automatic market maker (AMM) that automatically connects buy and sell orders based on predetermined parameters using a smart contract. Here it is not necessary to connect traders directly with other traders and liquidity will be available as long as investors have entered their assets into the pool.

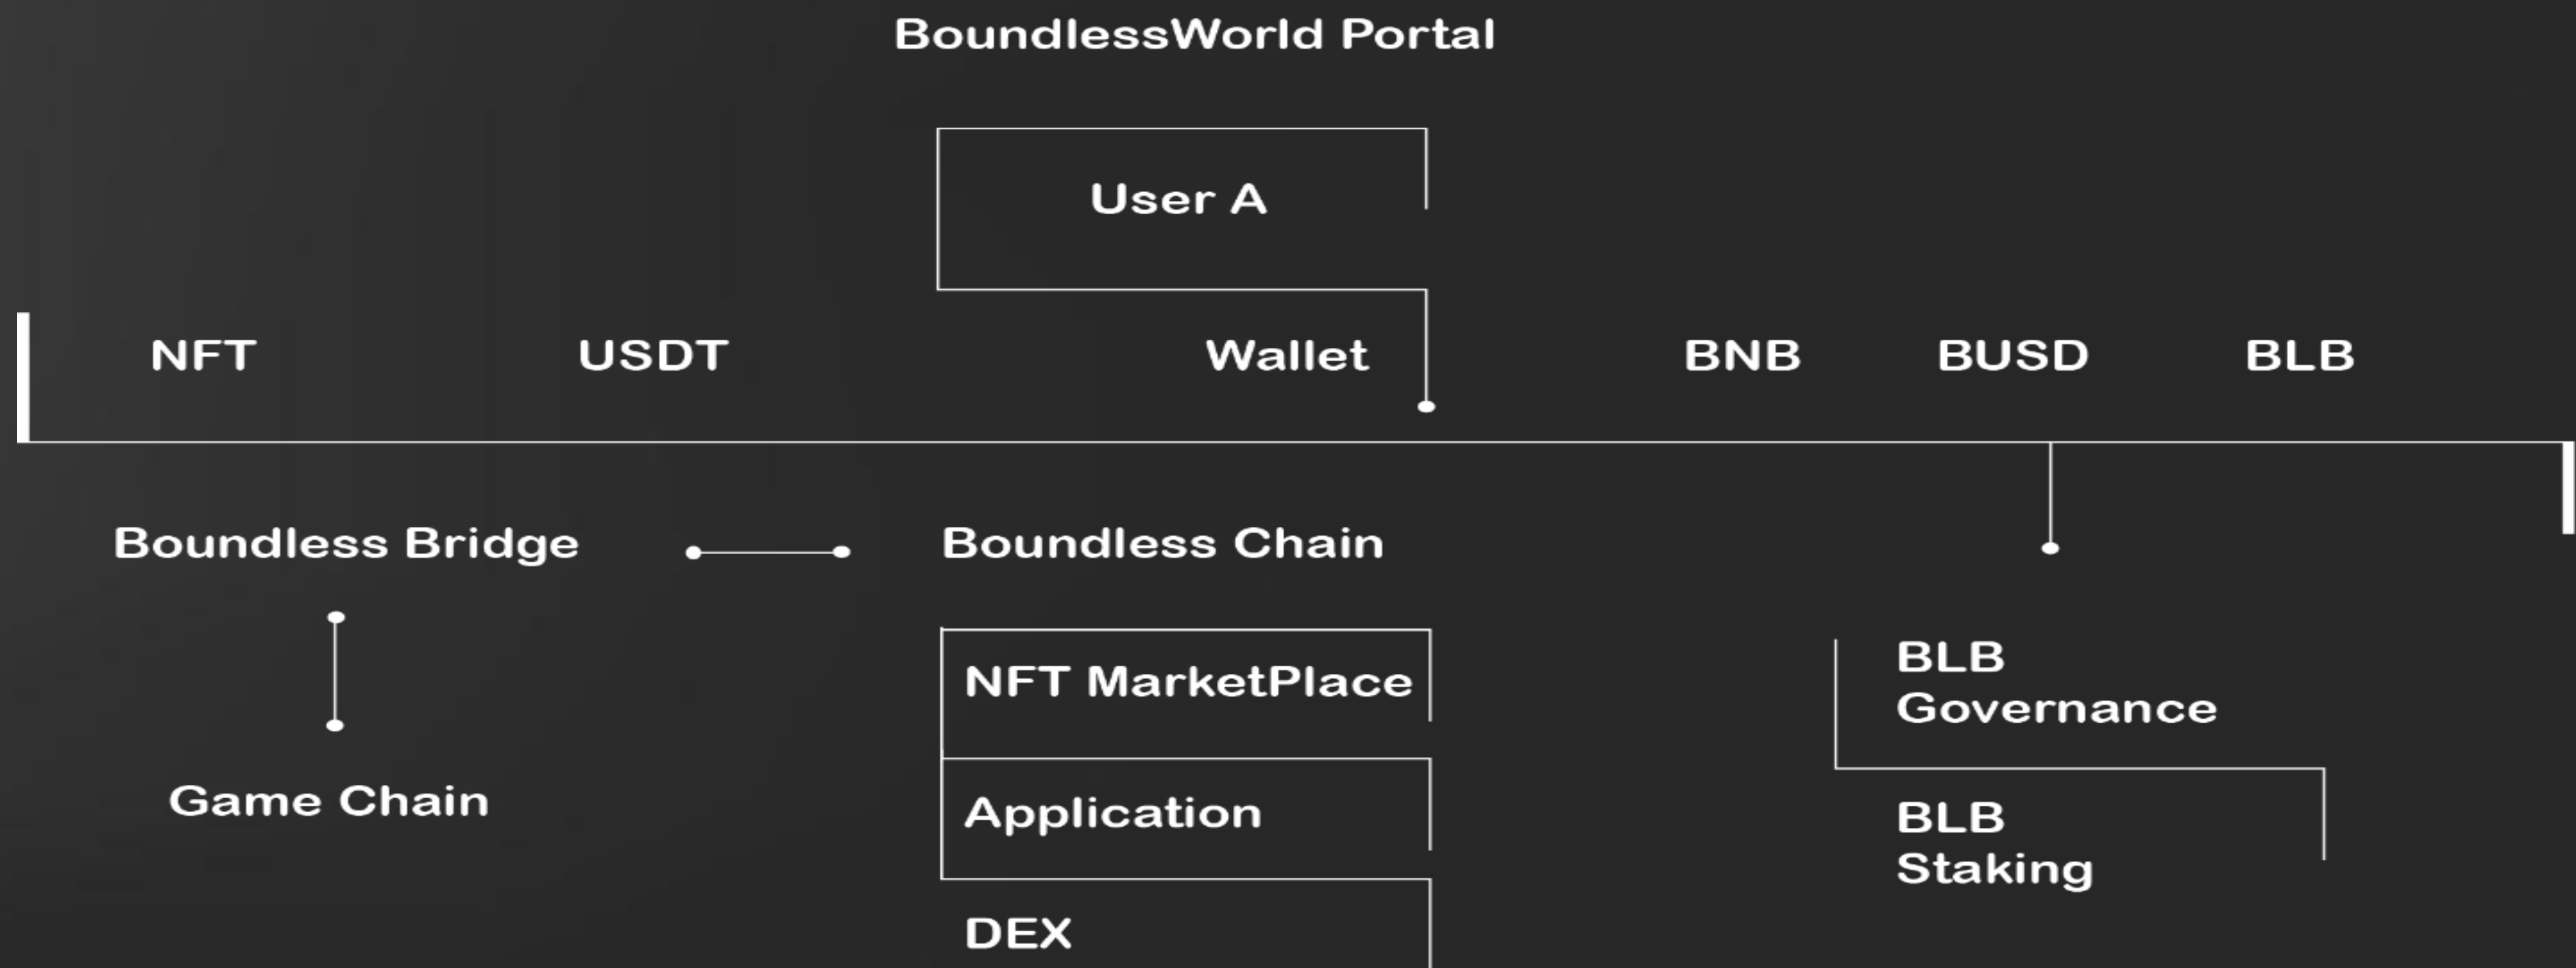

PRICING PROCESS IN A LIQUIDITY POOL

A liquidity pool is designed to execute transactions and maintain the price according to a fixed product formula, which ensures that the value of each reserve remains constant; Even if the asset ratios change. Buy transactions increase the price of the purchased asset relative to the sold asset, and sell transactions decrease the price of the sold asset. You can add liquidity to the pool. In exchange for adding liquidity, you receive trading fees for that currency pair, BLB tokens.

WALLET

Wallets are tools for protecting and maintaining cryptocurrency assets. People active in this field with the growth of technology and the expansion of blockchain and cryptocurrency market have come to the point that they need digital and physical wallets to store and move their cryptocurrencies. In addition to security and high data transfer speed, such a wallet also maintains the user's privacy and will improve day by day to meet the needs of users. In designing a new digital wallet as a part of its Boundless App, Future Market Maker company provided this wallet in search of a safe, transparent and fast solution for the user to transfer and store digital assets. We will explain the introduction of features and various items worth mentioning in this wallet.

SECURITY

We know that in order for users' requests to be made continuously and quickly, we need full-time support and activation of our wallet. Due to the sensitivity of the user and the preservation of the client's property, this wallet needs an independent server on which the firewall is properly installed. The firewall makes the wallet more secure against possible profit-seeking attacks on your assets. To enable the wallet automatically, make sure your firewall is secure and up-to-date before doing so. The boundless world project helps users by creating an online wallet to manage deposit addresses And by using the proof of stake (pos) protocol, our team has provided users with several points, which includes detailed security protocols included in a pos protocol, which reduces selfish acts in the network by issuing penalties. And also, with the lowering of transaction costs, it is much more economical for users. We must mention that activating the wallet in the Boundless App is independent of the Boundless App.

In such a way that after launching the Boundless App and going through the initial activation steps, a wallet is not created for the user, and if a person needs a wallet, he can do the Boundless App activation steps in the wallet section of the Boundless App separately.

Since the BLB token is launched on the bnb smart chain platform, all the transactions made in the wallet are made by converting BLB to other currencies that are on the bnb smart chain platform, which includes the stable coin busd and the bnb coin itself.

“ PROFILE

Each person in this section has a private profile that has personal information, a general introduction such as name and profile, and a picture for their profile. In this section, each person's profile photo will be converted into NFT by the Boundless App development team and assigned to the user. In order to launch the Boundless App and create a profile and user panel, the user allows himself the possibility of entering the profile and other services and features of the Boundless App by registering his email, contact number and a selected password at the beginning of the Boundless App activation process.

”

MARKET PLACE NFT

According to the mentioned details, the BoundlessWorld project has planned extensive activities in the fields of metaverse and gaming in the future and has started designing NFT collections to advance its goals. In addition to our site, these collections are also placed in the Boundless App and in the market place NFT section, and users can buy these valuable digital assets in this way.

CHAT PAGE

Since the user registers his mobile number and email at the time of activating the application and sets up his user panel, he can use his smartphone notebook to communicate with those who work in this Boundless App in the form of messages. In this section, the user can start communicating with other users between normal chat or blockchain based chat as needed.

“ ADVERTISEMENTS AND NEWS

In a part of the Boundless App, a space is created where up-to-date and real-time news of the crypto market is available to the audience. In addition, in this section, active projects in the relevant fields can submit their advertising requests for branding and visibility as much as possible. And by introducing themselves, join the cycle of competition with other users, help grow their business and accelerate this process.

”

THE LAND OF BOUNDLESSWORLD

The boundless land project includes seven planets in the world of Metaverse, one of which will be opened to the public as a digital property for buying and selling. The difference between the boundless land project and other projects is in the way of setting up the city and the game, which is fully explained in the section related to the game. The city and game sections have been launched separately with the aim of implementing each section in the best possible way. Buying land in boundless land can be a big step for many investors, because the number of lands and their distribution method will be very limited and will proceed with an organizational sales strategy.

Those interested in buying and selling NFT and boundless land digital properties should use BLB token which is based on BNB smart chain. Each piece of land in this project is a unique and non-exchangeable token on the smart chain bep721,bep-1155,bsc, these two chains offer the same functionality as Ethereum standards. And now it has become attractive to NFT lovers and makers because of its very low fees. Boundless land is a browser-based virtual reality world platform that will launch and run on its own application after launch and operation.

THE LAND OF BOUNDLESSWORLD

As mentioned above, each piece of land is a unique and irreplaceable token in the bep-721, bep-1155 chain, which will be available to the public with the number of 66,000 pieces in the dimensions of 4x4, 8x8, 16x16. Also, users can purchase several pieces of land next to each other in situations that have the ability to reach a consensus and combine them together. Also, in the future, you can interact with each other in this real but virtual world with virtual reality headsets and augmented reality glasses in boundless land, play games, study, hold meetings or attend concerts and you can also expand your personal businesses. In the end, we will promise our dear users that we will not open and exploit one of the seven planets in the future with the progress of the Metaverse world and unlimited capabilities until the Metaverse world becomes stable and evolves. And whenever there is a full development in this industry, we will open this planet first to our old users and then to the public if you want.

TOTAL NUMBER OF PLOTS

Separation based on the number of dimensions:

TOTAL NUMBER OF PLOTS

The manner and amount of land distribution based on the separation of dimensions into a specific and identical percentage:

Player bonus: 7% of total

Locked lands: 15% of total

Sale of private land: 10% of the total

Sale of public land: 25% of the total

Development and business team: 3% of total

General sale in three stages: 40% of the total

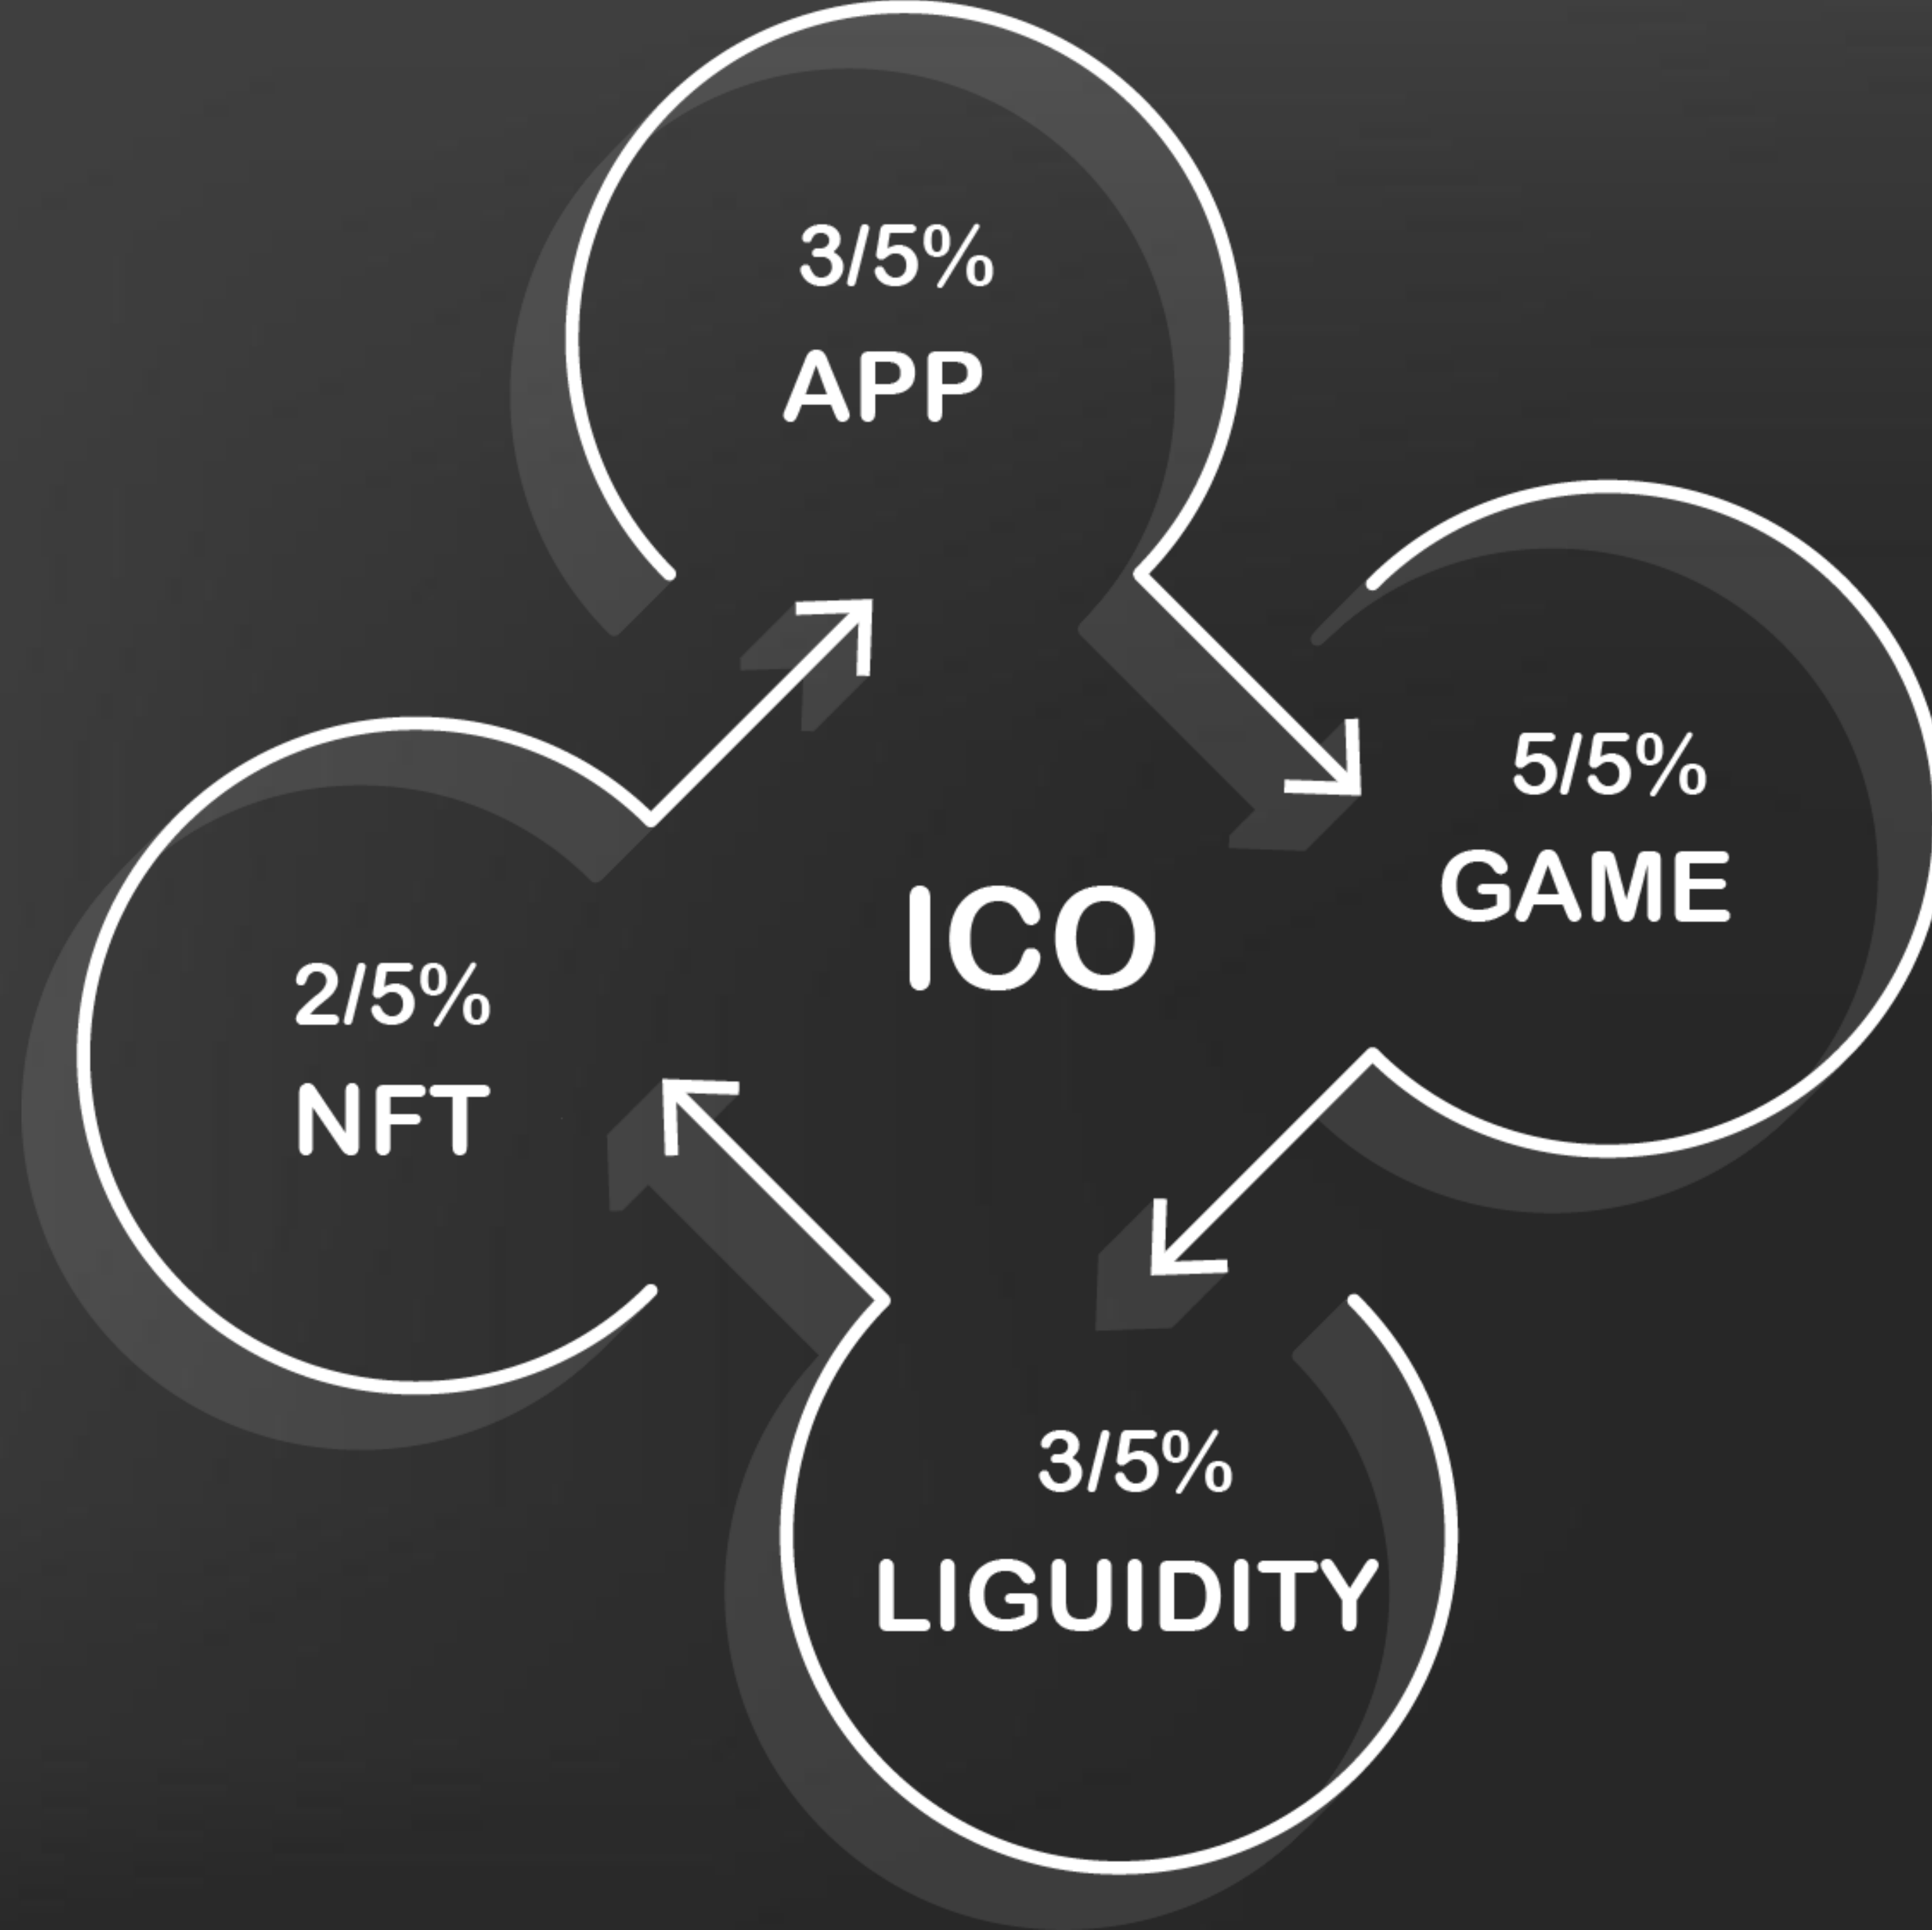

PURCHASE AND SALE TOKEN

BLB is a tool and necessary token for the BoundlessWorld platform, which is used as a basis for transactions inside the BoundlessWorld and is built on the BNB smart chain platform. Players use BLB token to play - buy equipment or NFT and also buy land and it is used as a measure to evaluate the price of a piece of land in boundlees world. By using BLB token, you can perform staking operations and it allows you to get more BLB. Users can earn points by playing games and convert them into our tokens. Builders use BLB to acquire assets. A part of the income from the sale of the company's assets through BLB enters the company's treasury and is returned to the market to pay operating costs.

Governance (DAO): BLB is a governance token that allows holders to participate in governance.

ICO CHART

Game

World War Boundless

The future market maker company intends to seriously enter the metaverse space after advancing its goals in different parts of the project and provide ideal solutions for its ecosystem and the current problems of metaverse and gaming projects. In the future, according to the details mentioned in the boundless land section, land will also have an intersection and cooperation with boundless game. The general idea of the company and the game developers is to design an attractive and efficient game and work as a win-win for both the game enthusiasts and the overall ecosystem of the BoundlessWorld project. In such a way that the value of the token of the project is preserved and at the same time it helps to preserve the value of the assets of investors and players.

World War Boundless

To learn more about the story, let's give a brief explanation about boundless game: A flourishing civilization that has gone to destruction, begins to revive and takes the same path that it took in the past in a different way. These stages are generally passed by the players in 7 planets. In the heart of each of these steps, there are many parts that create a competitive atmosphere full of events for users.

In addition to the explanations given, the participants in the game can create unexpected challenges for each other individually and as a team, which helps to improve the game experience even more. The events of the game are such that improving intelligence and controlling emotions and excitement play a key role in it, and it is necessary to find suitable opportunities and make better decisions.

GAME CHART

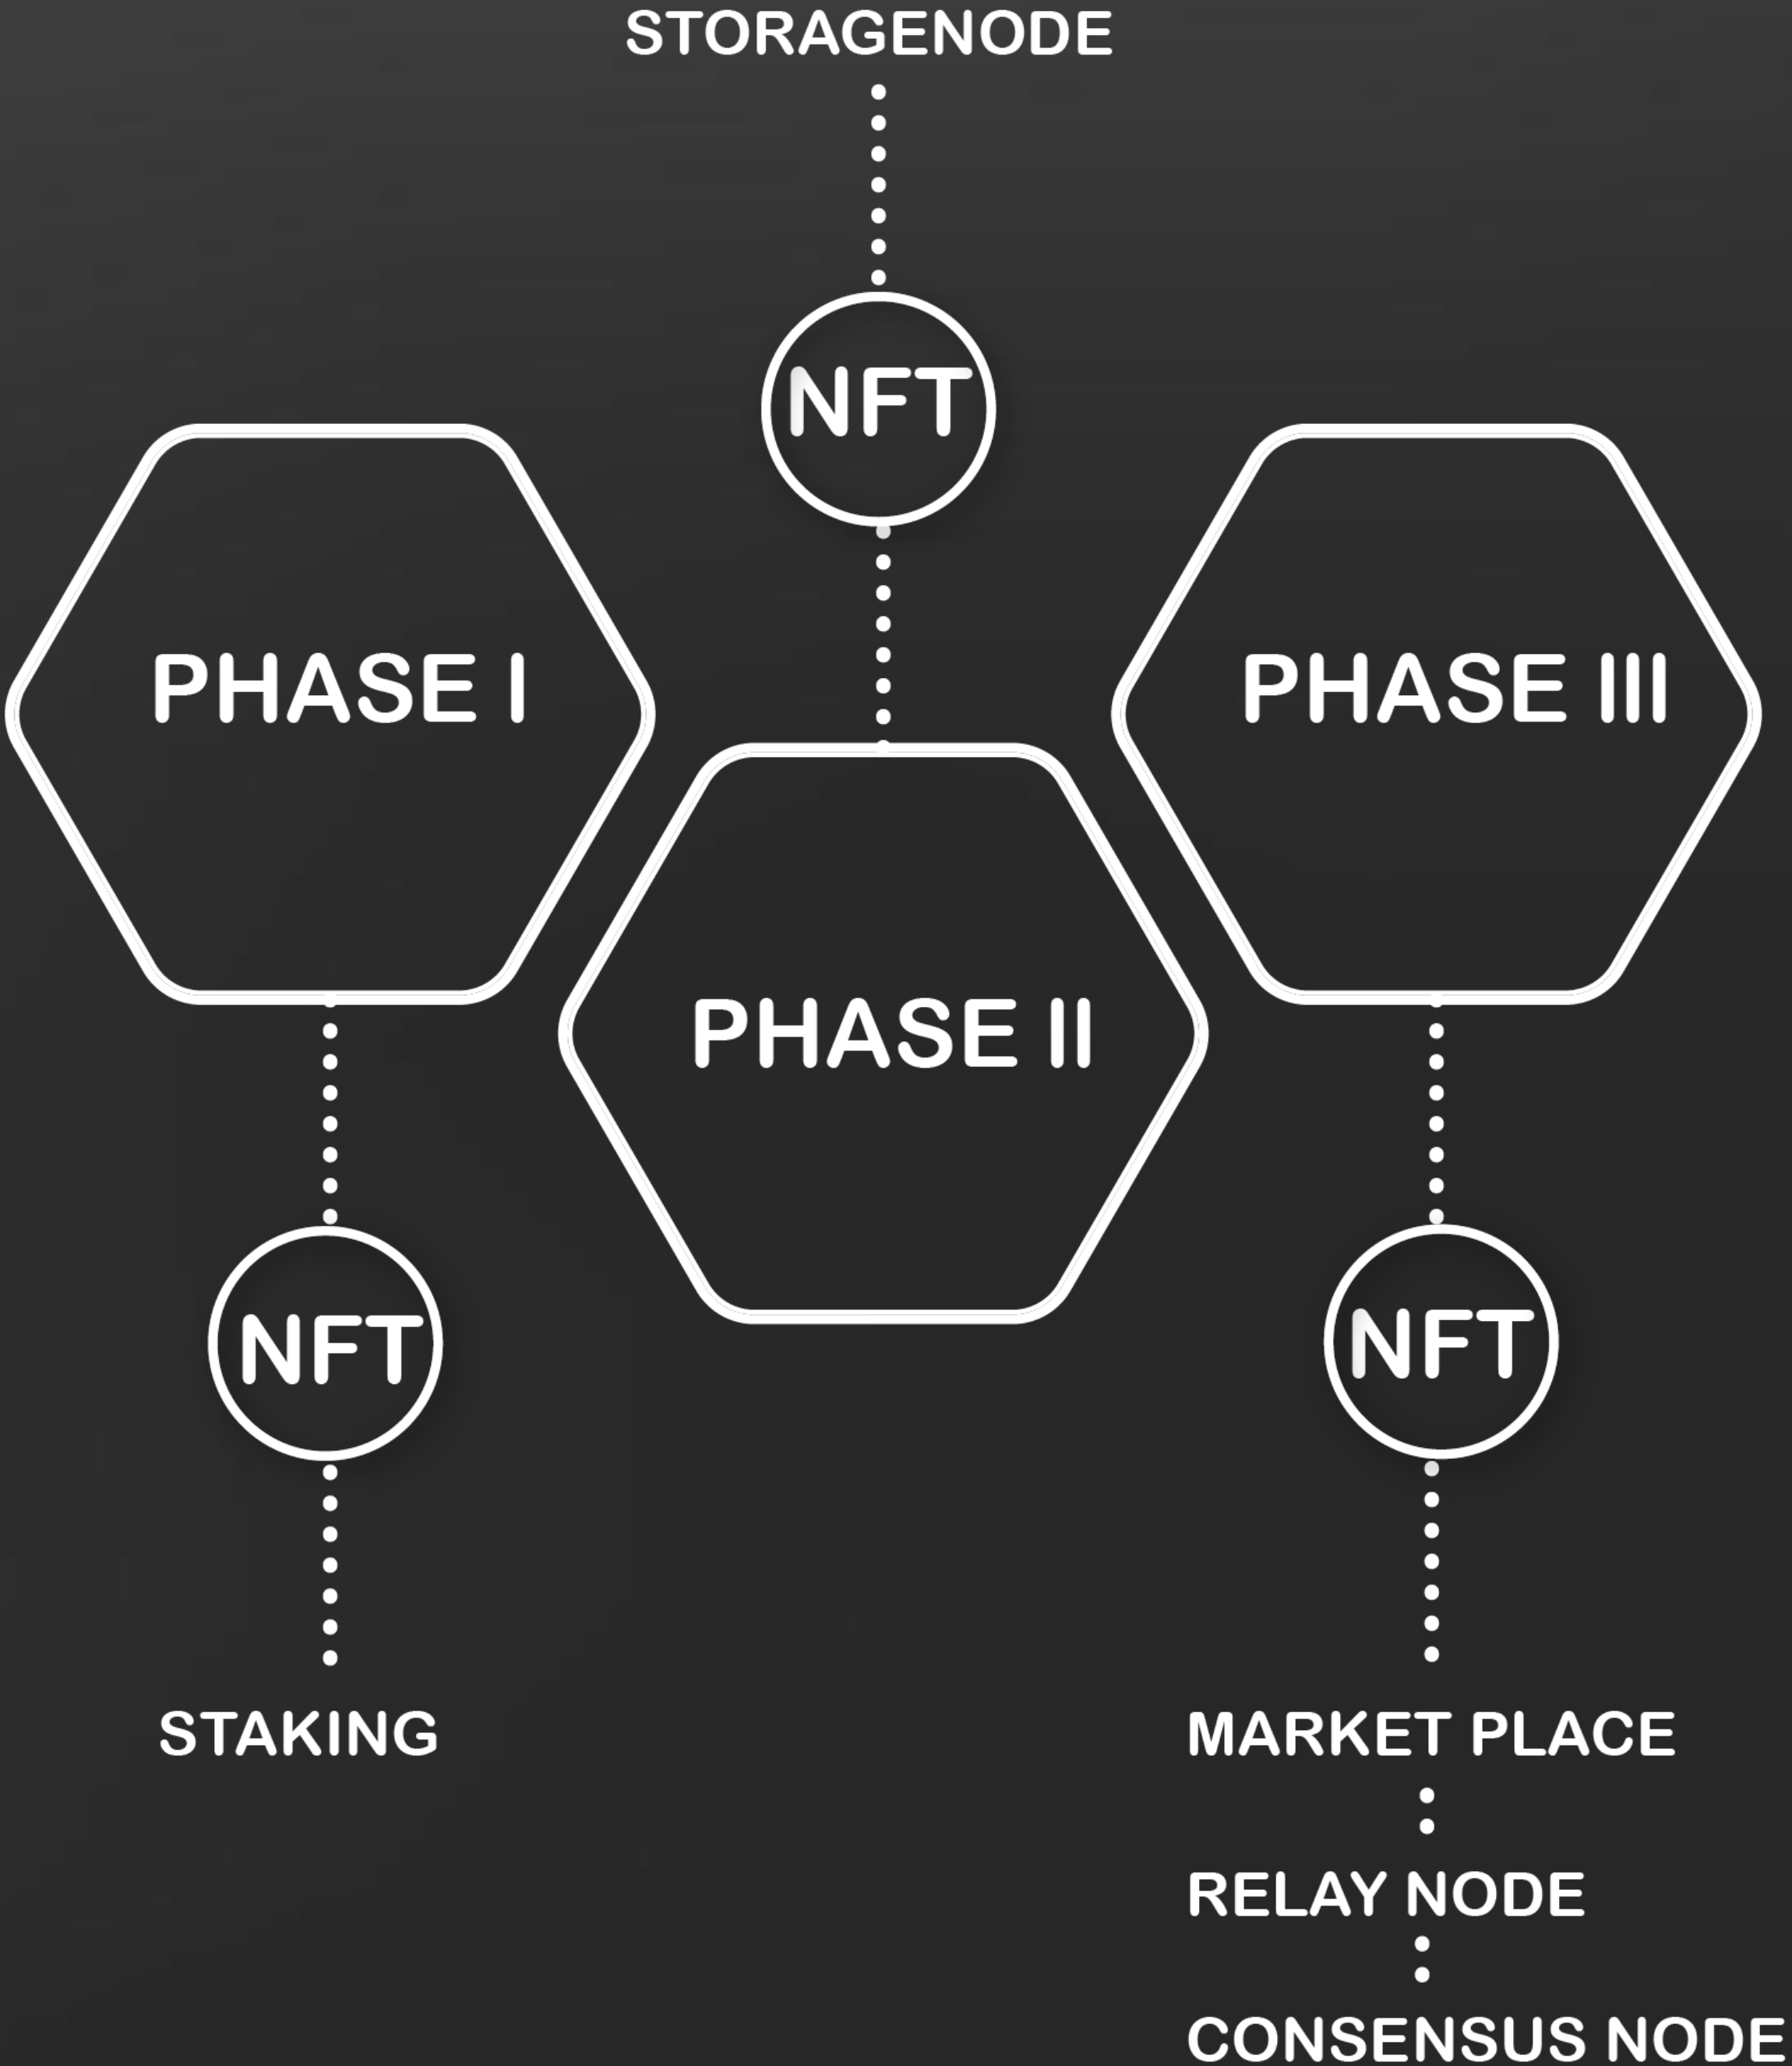

Nft

A Non - Fungible Token, more commonly known as an NFT, is a unique asset that cannot be divided and NFT can be attached to real-world objects. Currently, most NFT projects for digital collectibles, video game assets and virtual worlds or well-established token trading ecosystems and platforms allow you to easily create NFT tokens, and view and trade their contracts. Today, NFTs have gained a lot of popularity and are an emerging sector in the global game market, and in the virtual world BoundlessWorld uses blockchain and NFT technology to empower players and creators. You can upgrade your NFTs through in-game activity or save and maintain them to earn money. The first way to earn passive income from NFTs is to rent them, and you can also display your upgraded NFTs for sale in the Market place section of our site or in secondary markets (open sea). Users also benefit from other benefits through the use of NFT.

NFT CHART

NFT SECURITY

Adoption of asynchronous tokens among individuals and companies around the world is growing at an increasingly exciting pace as we live in a blockchain-powered world. NFT is an encrypted token that is managed and facilitated by the blockchain in secondary markets. Each NFT is distinct or unique, indivisible and not interchangeable. Digital assets that exist on the blockchain are extremely secure, which means that it is unlikely that anyone will lose their assets due to a hack or attack at the blockchain level because the blockchain is a distributed ledger. Blockchain-based gaming platforms can provide ultimate control to users and can freely buy and sell their digital assets. Gamers are the real and permanent owners of their digital items, even if the game is shut down or abandoned, they are allowed to trade in their assets. Once the NFT is registered on the blockchain and the public offering is completed, all data can be publicly and independently verified, when the data cannot be manipulated, its authenticity cannot be challenged.

“ **BoundlessWorld team members**

The BoundlessWorld team consisting of experts and programmers in various fields of technology and blockchain, by examining the needs and interests of the users of the digital world, we have decided to eliminate the gaps in this space. And by creating a transparent and safe platform, respecting the rights of users with fair legislation, we have planned and designed a platform with new capabilities on the blockchain platform, which we will continuously advance in the direction of the evolution of the idea. Communicating and chatting with users on the blockchain platform is a unique and practical approach that will definitely affect the future of this space. The BoundlessWorld team's vision in the future with its companions and users will definitely be bright and stable.
